Apps Breakdown:

1. **Core App:**
   - Handles project-wide settings, base templates, and any common functionalities.
2. **Authentication App:**
   - Manages user authentication and related views (login, logout, registration).
   - Utilizes Django's built-in authentication system or a custom user model.
3. **Contacts App:**
   - Defines models for storing contact information (name, email, phone, etc.).
   - Implements views for listing, creating, updating, and deleting contacts.
4. **Organizations App:**
   - Manages organizations or companies associated with your CRM.
   - Defines models for organizations and views for CRUD operations.
5. **Deals App:**
   - Handles deals or opportunities that your sales team is working on.
   - Models represent the deal information, and views handle interactions.
6. **Tasks App:**
   - Tracks tasks or to-dos related to contacts, organizations, or deals.
   - Models define task details, and views handle task management.
7. **Meetings App:**
   - Manages scheduled meetings with clients or team members.
   - Models represent meeting details, and views handle meeting scheduling.
8. **Static_Media App:**
   - Manages static files (CSS, JavaScript) and media files (user uploads).
